## **Safety Notes**

### **General Power Tool Safety Warnings**

**NARNING**Read all safety warnings and all instructions. Failure to follow

the warnings and instructions may result in electric shock, fire and/or serious injury.

## Save all warnings and instructions for future reference.

The term "power tool" in the warnings refers to your mains-operated (corded) power tool or battery-operated (cordless) power tool.

#### 1) Work area safety

- a) Keep work area clean and well lit. Cluttered or dark areas invite accidents.
- b) Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases or dust. Power tools create sparks which may ignite the dust or fumes.
- c) Keep children and bystanders away while operating a power tool. Distractions can cause you to lose control.

### 2) Electrical safety

- a) Power tool plugs must match the outlet.
  Never modify the plug in any way. Do not
  use any adapter plugs with earthed
  (grounded) power tools. Unmodified
  plugs and matching outlets will reduce
  risk of electric shock.
- b) Avoid body contact with earthed or grounded surfaces, such as pipes, radiators, ranges and refrigerators. There is an increased risk of electric shock if your body is earthed or grounded.
- c) Do not expose power tools to rain or wet conditions. Water entering a power tool will increase the risk of electric shock.
- d) Do not abuse the cord. Never use the cord for carrying, pulling or unplugging the power tool. Keep cord away from heat, oil, sharp edges and moving parts. Damaged or entangled cords increase the risk of electric shock.

- e) When operating a power tool outdoors, use an extension cord suitable for outdoor use. Use of a cord suitable for outdoor use reduces the risk of electric shock.
- f) If operating a power tool in a damp location is unavoidable, use a residual current device (RCD) protected supply. Use of an RCD reduces the risk of electric shock.

#### 3) Personal safety

- a) Stay alert, watch what you are doing and use common sense when operating a power tool. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication. A moment of inattention while operating power tools may result in serious personal injury.
- b) Use personal protective equipment. Always wear eye protection. Protective equipment such as dust mask, non-skid safety shoes, hard hat, or hearing protection used for appropriate conditions will reduce personal injuries.
- c) Prevent unintentional starting. Ensure the switch is in the off-position before connecting to power source and/or battery pack, picking up or carrying the tool. Carrying power tools with your finger on the switch or energising power tools that have the switch on invites accidents.
- d) Remove any adjusting key or wrench before turning the power tool on. A wrench or a key left attached to a rotating part of the power tool may result in personal injury.
- e) Do not overreach. Keep proper footing and balance at all times. This enables better control of the power tool in unexpected situations.
- f) Dress properly. Do not wear loose clothing or jewellery. Keep your hair, clothing and gloves away from moving parts. Loose clothes, jewellery or long hair can be caught in moving parts.

Bosch Power Tools

2 609 140 699 | (3.12.09)

### 16 | English

g) If devices are provided for the connection of dust extraction and collection facilities, ensure these are connected and properly used. Use of dust collection can reduce dust-related hazards.

#### 4) Power tool use and care

- a) Do not force the power tool. Use the correct power tool for your application. The correct power tool will do the job better and safer at the rate for which it was designed.
- b) Do not use the power tool if the switch does not turn it on and off. Any power tool that cannot be controlled with the switch is dangerous and must be repaired.
- c) Disconnect the plug from the power source and/or the battery pack from the power tool before making any adjustments, changing accessories, or storing power tools. Such preventive safety measures reduce the risk of starting the power tool accidentally.
- d) Store idle power tools out of the reach of children and do not allow persons unfamiliar with the power tool or these instructions to operate the power tool. Power tools are dangerous in the hands of untrained users.
- e) Maintain power tools. Check for misalignment or binding of moving parts, breakage of parts and any other condition that may affect the power tool's operation. If damaged, have the power tool repaired before use. Many accidents are caused by poorly maintained power tools.
- f) Keep cutting tools sharp and clean. Properly maintained cutting tools with sharp cutting edges are less likely to bind and are easier to control.
- g) Use the power tool, accessories and tool bits etc. in accordance with these instructions, taking into account the working conditions and the work to be performed. Use of the power tool for operations different from those intended could result in a hazardous situation.

#### 5) Battery tool use and care

- a) Recharge only with the charger specified by the manufacturer. A charger that is suitable for one type of battery pack may create a risk of fire when used with another battery pack.
- b) Use power tools only with specifically designated battery packs. Use of any other battery packs may create a risk of injury and fire.
- c) When battery pack is not in use, keep it away from other metal objects, like paper clips, coins, keys, nails, screws or other small metal objects, that can make a connection from one terminal to another. Shorting the battery terminals together may cause burns or a fire.
- d) Under abusive conditions, liquid may be ejected from the battery; avoid contact. If contact accidentally occurs, flush with water. If liquid contacts eyes, additionally seek medical help. Liquid ejected from the battery may cause irritation or burns.

### 6) Service

a) Have your power tool serviced by a qualified repair person using only identical replacement parts. This will ensure that the safety of the power tool is maintained.

### Safety Warnings for Screwdriver

- ▶ Hold power tool by insulated gripping surfaces, when performing an operation where the fastener may contact hidden wiring. Fasteners contacting a "live" wire may make exposed metal parts of the power tool "live" and could give the operator an electric
- ► Secure the workpiece. A workpiece clamped with clamping devices or in a vice is held more secure than by hand.
- ▶ Always wait until the machine has come to a complete stop before placing it down. The tool insert can jam and lead to loss of control over the power tool.
- ▶ Do not open the battery. Danger of shortcircuiting.

Bosch Power Tools

Protect the battery against heat, e. g., against continuous intense sunlight, fire, water, and moisture. Danger of explosion.

- ▶ In case of damage and improper use of the battery, vapours may be emitted. Provide for fresh air and seek medical help in case of complaints. The vapours can irritate the respiratory system.
- ▶ Use the battery only in conjunction with your Bosch power tool. This measure alone protects the battery against dangerous overload.
- Use only original Bosch batteries with the voltage listed on the nameplate of your power tool. When using other batteries, e. g. imitations, reconditioned batteries or other brands, there is danger of injury as well as property damage through exploding batteries.

**Technical Data** 

\*Accessories shown or described are not part of the standard delivery scope of the product. A complete overview of accessories can be found in our accessories program.

	Cordless Impact Scredriver	GDR 10,8-LI Professional			
	Article number		3 601 JA6 9		
	Rated voltage	V=	10.8		
	No-load speed	min <sup>-1</sup>	0-2600		
	Impact rate	min <sup>-1</sup>	0-3100		
•	Maximum torque, hard screwdriving application accord- ing to ISO 5393	Nm	105		
	Bolt size		M4 - M12		
٠	Max. screw dia.	mm	8		
	Tool holder		¼" hexagon socket		
	Net weight	kg	0.96		
	Weight according to EPTA-Procedure 01/2003	kg	1.0		

Technical data determined with battery from delivery

Please observe the article number on the type plate of your machine. The trade names of the individual machines may vary.

### **Functional Description**

Read all safety warnings and all instructions. Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury.

While reading the operating instructions, unfold the graphics page for the machine and leave it open.

### **Intended Use**

The machine is intended for driving in and loosening screws and bolts as well as for tightening and loosening nuts within the respective range of dimension.

### **Product Features**

The numbering of the product features refers to the illustration of the machine on the graphics

- 1 Screwdriver bit with ball catch\*
- 2 Tool holder
- 3 Locking sleeve

### **Noise/Vibration Information**

Measured sound values determined according to EN 60745.

Typically the A-weighted noise levels of the product are: Sound pressure level 87 dB(A); Sound power level 98 dB(A). Uncertainty K = 3 dB.

### Wear hearing protection!

Vibration total values (triax vector sum) determined according to EN 60745:

Impact tightening of fasteners of the maximum capacity of the tool: Vibration emission value  $a_h = 9 \text{ m/s}^2$ , Uncertainty K = 1.5 m/s<sup>2</sup>.

The vibration emission level given in this information sheet has been measured in accordance with a standardised test given in EN 60745 and may be used to compare one tool with another. It may be used for a preliminary assessment of exposure.

The declared vibration emission level represents the main applications of the tool. However, if the tool is used for different applications, with different accessories or poorly maintained, the vibration emission may differ. This may significantly increase the exposure level over the total working period.

An estimation of the level of exposure to vibration should also take into account the times when the tool is switched off or when it is running but not actually doing the job. This may significantly reduce the exposure level over the total working period.

Identify additional safety measures to protect the operator from the effects of vibration such as: maintain the tool and the accessories, keep the hands warm, organisation of work patterns.

### Declaration of Conformity (€

We declare under our sole responsibility that the product described under "Technical Data" is in conformity with the following standards or standardization documents: EN 60745 according to the provisions of the directives 2004/108/EC, 98/37/EC (until 28 Dec 2009), 2006/42/EC (from 29 Dec 2009).

Technical file at: Robert Bosch GmbH, PT/ESC, D-70745 Leinfelden-Echterdingen

Robert Bosch GmbH. Power Tools Division D-70745 Leinfelden-Echterdingen 26.10.2009

### Assembly

### **Battery Charging (see figure A)**

▶ Use only the battery chargers listed on the accessories page. Only these battery chargers are matched to the lithium ion battery of your power tool.

Note: The battery is supplied partially charged. To ensure full capacity of the battery, completely charge the battery in the battery charger before using your power tool for the first time.

The lithium ion battery can be charged at any time without reducing its service life. Interrupting the charging procedure does not damage the battery.

The lithium ion battery is protected against deep discharging by the "Electronic Cell Protection (ECP)". When the battery is empty, the machine is switched off by means of a protective circuit: The inserted tool no longer rotates.

### WARNING

Do not continue to press the On/Off switch after the ma-

chine has been automatically switched off. The battery can be damaged.

To remove the battery 7 press the unlocking buttons 6 and pull out the battery downwards. Do not exert any force.

The battery is equipped with a NTC temperature control which allows charging only within a temperature range of between 0 °C and 45 °C. A long battery service life is achieved in this man-

Observe the notes for disposal.

2 609 140 699 | (3.12.09)

Bosch Power Tools

▶ Before any work on the machine (e. g., maintenance, tool change, etc.) as well as during transport and storage, set the rotational direction switch to the centre position. Unintentional actuation of the On/Off switch can lead to injuries.

#### Inserting

Pull the locking sleeve 3 forward, push the insert tool to the stop into the tool holder 2 and release the locking sleeve 3 to lock the insert

Use only screwdriver bits with ball catch 1 (DIN 3126-E6.3). Other screwdriver bits 13 can be used with a universal bit holder with ball catch 12.

### Removing

Pull the locking sleeve 3 forward and remove the insert tool.

### Operation

### **Method of Operation**

The tool holder 2 with the tool is driven by an electric motor via a gear and impact mechanism.

The working procedure is divided into two phas-

Screwing in and tightening (impact mechanism in action).

The impact mechanism is activated as soon as the screwed connection runs tight and thus load is put on the motor. In this instance, the impact mechanism converts the power of the motor to steady rotary impacts. When loosening screws or nuts, the process is reversed.

### **Starting Operation**

#### Inserting the Battery

▶ Use only original Bosch lithium ion batteries with the voltage listed on the nameplate of your power tool. Using other batteries can lead to injuries and pose a fire hazard.

Note: Use of batteries not suitable for the machine can lead to malfunctions of or cause damage to the power tool.

Set the rotational direction switch 8 to the centre position in order to avoid unintentional starting. Insert the charged battery 7 into the handle so that it can be felt to engage and faces flush against the handle.

### **Reversing the Rotational Direction** (see figure C)

The rotational direction switch 8 is used to reverse the rotational direction of the machine. However, this is not possible with the On/Off switch 9 actuated.

Right rotation: For driving in screws and tightening nuts, press the rotational direction switch 8 through to the left stop.

Left Rotation: For loosening and unscrewing screws and nuts, press the rotational direction switch 8 through to the right stop.

### **Switching On and Off**

To start the machine, press the On/Off switch 9 and keep it pressed.

The power light 4 lights up when the On/Off switch 9 is slightly or completely pressed, and allows the work area to be illuminated when lighting conditions are insufficient.

To switch off the machine, release the On/Off switch 9.

### **Adjusting the Speed**

The speed of the switched on power tool can be variably adjusted, depending on how far the On/Off switch 9 is pressed.

Light pressure on the On/Off switch 9 results in a low rotational speed. Further pressure on the switch results in an increase in speed.

#### **Battery Charge-control Indication**

The battery charge-control indicator **10** consists of three green LEDs, and indicates the charge condition of the battery for a few seconds when the On/Off switch **9** is pressed halfway or fully.

LED	Capacity
Continuous lighting 3 x green	≥ 2/3
Continuous lighting 2 x green	≥ 1/3
Continuous lighting 1 x green	< 1/3
Flashing light 1 x green	Reserve

### **Temperature Dependent Overload Protection**

When using as intended for, the power tool cannot be subject to overload. When the load is too high or the allowable battery temperature range of  $0-70\,^{\circ}\text{C}$  is exceeded, the speed is reduced. The power tool will not run at full speed until reaching the allowable battery temperature.

### **Protection Against Deep Discharging**

The lithium ion battery is protected against deep discharging by the "Electronic Cell Protection (ECP)". When the battery is empty, the machine is switched off by means of a protective circuit: The inserted tool no longer rotates.

### **Working Advice**

Apply the power tool to the screw/nut only when it is switched off. Rotating tool inserts can slip off.

The torque depends on the impact duration. The maximum achieved torque results from the sum of all individual torques achieved through impact. The maximum torque is achieved after an impact duration of 6-10 seconds. After this duration, the tightening torque is increased only minimally.

The impact duration is to be determined for each required tightening torque. The actually achieved tightening torque is always to be checked with a torque wrench.

## Screw Applications with Hard, Spring-loaded or Soft Seat

When in a test, the achieved torques in an impact series are measured and transferred into a diagram, resulting in the curve of a torque characteristic. The height of the curve corresponds with the maximum reachable torque, and the steepness indicates the duration in which this is achieved.

A torque gradient depends on the following factors:

- Strength properties of the screws/nuts
- Type of backing (washer, disc spring, seal)
- Strength properties of the material being screwed/bolted together
- Lubrication conditions at the screw/bolt connection

The following application cases result accordingly:

- A hard seat is given for metal-to-metal screw applications with the use of washers. After a relatively short impact duration, the maximum torque is reached (steep characteristic curve). Unnecessary long impact duration only causes damage to the machine.
- A spring-loaded seat is given for metal-tometal screw applications, however with the use of spring washers, disc springs, studs or screws/nuts with conical seat as well as when using extensions.
- A soft seat is given for screw applications,
   e. g., metal on wood or when using lead
   washers or fibre washers as backing.

For a spring-loaded seat as well as for a soft seat, the maximum tightening torque is lower than for a hard seat. Also, a clearly longer impact duration is required.

Bosch Power Tools

2 609 140 699 | (3.12.09)

### Reference Values for Maximum Screw/Bolt Tightening Torques

Calculated from the tensional cross-section; utilization of the yield point 90% (with friction coefficient  $\mu_{total}$  = 0.12). As a control measure, always check the tightening torque with a torque wrench.

Property Classes according to DIN 267	Stand	Standard Screws/Bolts							High-strength Bolts		
	3.6	4.6	5.6	4.8	6.6	5.8	6.8	6.9	8.8	10.9	12.9
M 6	2.71	3.61	4.52	4.8	5.42	6.02	7.22	8.13	9.7	13.6	16.2
M 8	6.57	8.7	11	11.6	13.1	14.6	17.5	19.7	23	33	39
M 10	13	17.5	22	23	26	29	35	39	47	65	78
M 12	22.6	30	37.6	40	45	50	60	67	80	113	135

### Tips

Before screwing larger, longer screws into hard materials, it is advisable to predrill a pilot hole with the core diameter of the thread to approx.  $^{2}/_{3}$  of the screw length.

### **Maintenance and Service**

### **Maintenance and Cleaning**

- ▶ Before any work on the machine (e. g., maintenance, tool change, etc.) as well as during transport and storage, set the rotational direction switch to the centre position. Unintentional actuation of the On/Off switch can lead to injuries.
- ► For safe and proper working, always keep the machine and ventilation slots clean.

When the battery is no longer operative, please refer to an authorised after-sales service agent for Bosch power tools.

If the machine should fail despite the care taken in manufacturing and testing procedures, repair should be carried out by an after-sales service centre for Bosch power tools.

In all correspondence and spare parts order, please always include the 10-digit article number given on the type plate of the machine.

### **After-sales Service and Customer Assistance**

Our after-sales service responds to your questions concerning maintenance and repair of your product as well as spare parts. Exploded views and information on spare parts can also be found under:

#### www.bosch-pt.com

Our customer service representatives can answer your questions concerning possible applications and adjustment of products and accessories.

### Disposal

The machine, accessories and packaging should be sorted for environmental-friendly recycling.

### Only for EC countries:

Do not dispose of power tools into household waste!
According the European Guideline 2002/96/EC for Waste Electrical and Electronic Equipment and its implementation into national

right, power tools that are no longer usable must be collected separately and disposed of in an environmentally correct manner.

#### **Battery packs/batteries:**

Do not dispose of battery packs/batteries into house-hold waste, fire or water. Battery packs/batteries should be collected, recycled or disposed of in an environmental-friendly manner.

#### Only for EC countries:

Defective or dead out battery packs/batteries must be recycled according the guideline 91/157/EEC.

Batteries no longer suitable for use can be directly returned at:
