WORK THE

JUST MIX AND MATCH FOR ON-THE-JOB PROTECTION

Work with the climate. Chances are you work both indoors and outdoors during all four seasons. Meaning rain, snow and wind – and huge temperature variations. Dress right, work smart. With the 3-layers of the Snickers Workwear System you can.

TEMPERATURE CONTROL. Our garments are designed so that you can easily trap body heat or release it by regulating the airflow – both at the collar and the waist. Think of it as a built-in temperature control system.

2

Second layer for insulation. These garments are designed to insulate by creating a pocket of air around your body – keeping you warm. We have used advanced porous materials, such as micro fleece, fleece, pile and quilt. Our Micro Fleece Long Johns and 8006 Fleece Jacket are perfect examples. See page 25 and 13.

CLIMATE COMFORT. Advanced protection requires advanced ventilation, so that you can adjust the temperature for optimal comfort. The front zipper is one way, ventilation zippers under the arms and at the back are another. So too is being able to adjust the bottom of jackets and trousers. And remember: 80% of body heat escapes through the head – so use a cap or hood.

1

First layer for moisture transport. Here we're talking about underwear. Of course it has to be soft and comfortable yet extremely hard wearing. But it also must keep your body dry and warm. So forget cotton – it absorbs and retains water. The answer? Wicking Polyester. Check out our First Layer Briefs, T-shirts, Turtle Necks and Long Johns. See page 25.

3

Third layer for weather protection. The weather never stays the same for long. Sooner or later it will try to slow you down – and make you wish you were somewhere else. Which is why every professional needs reliable wind and water protection. Your garment should be waterproof, yet breathable. Strong and durable. So explore our range – start with the high-tech 1778 A.P.S.™ All-Weather Jacket and 3978 A.P.S.™ All-Weather Trousers. See page 9.

INDOORS, OUTDOORS, INDOORS AGAIN? With the Snickers Workwear System you can adapt in a second. So that you always get optimal comfort, functionality and fit.

E SYSTEM!

TECTION AND COMFORT – ALL YEAR ROUND.

Work with versatility. With the flexible Snickers Workwear System, you get a unique opportunity to create a dynamic tool-carrying solution that meets your specific on-the-job needs. Giving you the protection and versatility you deserve.

Dynamic tool carrying. Get integrated convenience with limitless functionality. And it starts with our Flexi®Toolvest, which can be easily extended and worn over a work fleece or jacket. With our accessories you can tailor a pocket solution to your specific needs for maximum mobility. See page 19.

Ergonomic fit and freedom. All garments in the Snickers Workwear System have been carefully designed to ensure a fit that works with you. Pre-bent sleeves and Twisted Leg™ design are just two examples of what we mean by freedom of movement.

TOP QUALITY DURABILITY. Smart material selection, reinforcements where it counts, and acute attention to detail are just some of the things that ensure a long service life for all garments in the Snickers Workwear System.

WHERE DO YOU WANT THE POCKETS? On the toolvest, on the trousers or maybe on the belt – it's your choice. Our Flexi®Pocket System makes it easy to attach pockets and pouches where you want. See page 37.

Advanced protection. A professional career can span several decades – your knees however must last a lifetime. So protect yourself! Learn more about what the top-of-the-line KneeGuard™ positioning system can do for you – and then use it. See page 15.

WANT A PROFESSIONAL ADVANTAGE? Dress right. The Snickers Workwear System has what it takes, especially if you think innovative functionality, comfort and protection are important.

PUT TO THE TEST.

Cutting-edge workwear requires cutting-edge testing. Snickers Workwear works closely with accredited test laboratories to ensure our garments meet your expectations. But for us, the ultimate tests are carried out by our Test Crew – hard-working professionals in four countries who evaluate the quality, durability, comfort, protection and functionality of our garments, every day at work. After all, nothing beats reality, and Snickers Workwear is made for real needs.

Tensile Strength Strips of the fabric in both the warp and the weft direction are then fastened in a machine. The machine rips them apart and measures the force used in newtons. Snickers Workwear testing is performed according to the EN ISO 13934-1 international standard.

Tear Strength Tear strength is measured using the same type of machine as when testing tensile strength. Strips of the fabric in both the warp and the weft direction are cut in the middle. The force it takes to tear the fabric apart is measured in newtons. Snickers Workwear uses the EN ISO 13937-2 international standard.

Spray Test Measures water resistance. Water is poured through a funnel onto the fabric that is fastened in a frame with a sloping angle. The number of droplets remaining on the fabric at the end of the test is assessed against an international 1–5 scale, where 5 is best. Snickers Workwear uses the SS-EN ISO 24920 spray test.

Abrasion Resistance The fabric is abraded against a rough woollen cloth or glass paper in a Martindale machine. The abrasion stops when two threads break. Snickers Workwear uses the SS-ISO 12947-2 method, measuring against a woollen cloth and with a pressure of 12 kPa instead of 9 kPa. For extra-durable fabrics we use EN 530 with 12 kPa and glass paper.

Water Column Measures how much water pressure a waterproof fabric can withstand. Water is pressed against the fabric for a specific period of time. The result is measured in metres. A water column of 6 metres is equivalent to having 6 metres of water on top of the fabric without it penetrating the membrane or coating. Snickers Workwear uses the EN 20811/ISO 811 international standard.

Colour Fastness Washed fabric is compared to unwashed fabric and the colour difference is compared against an international grey scale. Colour bleeding is measured by washing the fabric together with a multi-fibre strip. The strip is judged and compared to a standardized 1–5 grey scale, where 5 is best.

FOR REAL.

THE SNICKERS WORKWEAR TEST CREW CHALLENGE US EVERY DAY, MAKING US CONSTANTLY PUSH THE CREATIVE AND TECHNOLOGICAL LIMITS IN THE DEVELOPMENT OF CUTTING-EDGE WORKWEAR.

PERSONAL PROTECTIVE EQUIPMENT.

Snickers garments meets the EU directive for personal protective equipment (PPE) and is marked in accordance with the CE marking regulations (EN standards).

EN 340 GENERAL REQUIREMENTS

Describes general basic requirements for protective clothing such as dimensions and markings. It also describes how ageing, strength, ergonomics and comparability should be assessed. EN340 cannot be used alone but is instead a basic standard that is used together with other standards and their specific requirement.

EU DIRECTIVE; PERSONAL PROTECTIVE EQUIPMENT (PPE) DIRECTIVE (89/686 EEC)

Classifies personal protective equipment into categories 0-3 where 0 is no-risk and 3 is high-risk. All the standards listed below fall into category 2 where accredited laboratories certify the garments.

EN 342 PROTECTION AGAINST COLD

Based not only on material but on the entire garment. The requirements are divided into 4 sections; thermal insulation, air permeability, resistance to water penetration and water vapour resistance, where the requirements are assessed with the help of standard conditions such as undergarments and ambient conditions.

Thermal insulation is measured in $m^2 K/W$ with underwear type B or type C (specified by the supplier) for ensembles and type R for single garments.

Air permeability, AP, is classed (in Pa) as follows:

Class 1: $100 < AP$

Class 2: $5 < AP \leq 100$

Class 3: $AP \leq 5$

Resistance against water vapour is classed in the same way as per EN 343. Thermal insulation is noted at the top in the symbol, air permeability in the middle and resistance to water penetration is at the bottom at the symbol.

EN 343 PROTECTION AGAINST FOUL WEATHER

This standard encompasses materials and stitching and is divided into two sections: water penetration and resistance to water vapour.

For water penetration there are 3 classes, where class 2 requires W_p (water pressure) ≥ 8000 Pa and class 3 requires $W_p \geq 13000$ Pa. Class 1 requires the same as class 2, but without pre-treatment.

For resistance against water vapour, that is to say RET, (the lower the rating the greater the penetration) there are 3 classes;

Class 1: $RET \geq 40$

Class 2: $20 > RET \geq 40$

Class 3: $RET \geq 20$

Water penetration is noted at the top in the symbol and resistance to water vapour is at the bottom in the symbol, see below.

EN 471 HIGH VISIBILITY WARNING CLOTHES

This standard specifies requirements for clothing capable of signalling the user's presence visually.

Performance requirements are included for colour and retroreflection as well as for minimum areas and for the disposition of the materials.

There are 3 different classes and class 3 is the highest class.

Class 3: Total fluorescent area must be at least $0.8 m^2$ and $0.2 m^2$ reflective material.

Class 2: Total fluorescent area must be at least $0.5 m^2$ and $0.13 m^2$ reflective material.

Class 1: Total fluorescent area must be at least $0.14 m^2$ and $0.10 m^2$ reflective material.

EN 531 PROTECTION AGAINST HEAT

A standard concerning protective garments for workers exposed to heat, designed to protect workers from brief contact with a flame and against at least one type of heat: B, C, D or E.

convective, radiant, large projections of molten metal or a combination of these heat hazards.

A. Limited flame spread

The material should meet the requirements of limited flame spread in accordance with EN 532.

To pass the EN 531 requirements the clothing must also protect against at least one form of heat.

B. Convective heat

Heat transported through the garment when exposed to flame. Heat from the flame source can injure the user even if the outer fabric does not burn. At least level B1 shall be met, which is 3-6 seconds to pain. B5 is the highest level.

C. Radiant heat

Exposure to low radiant heat over a longer period may cause injuries. Therefore, heat flux is measured against radiant heat. C1 indicates that the fabric meets level 1 which is 8-30 seconds to pain. Level 4 is the highest.

D. Molten aluminium splash

E. Molten iron splash

GETTING IT RIGHT.

When it comes to work wear, the construction of the garment is extremely important. For us at Snickers Workwear, staying at the forefront of textile development is a top priority. By this we mean identifying the right material for each product and application. This depends on the profession, the working environment, the season and the weather the garment will be used in. Other important considerations are of course demands on durability and washing. And not least of all working comfort.

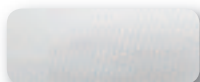

ABSOLUTE COTTON

Material: 100% cotton, 390 g/m². **Features:** A robust 100% cotton fabric. Snickers Absolute cotton is stronger than ever. Provides the feel-good comfort, insulation and ventilation of 100% natural cotton material.

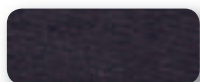

CANVAS+™

Material: 60% cotton/40% polyester, 340 g/m². **Features:** Strong and comfortable. The cotton fabric is reinforced with a small amount of polyester thread. This enables the comfort of cotton, yet with twice the strength and durability. The feeling of cotton is retained and you enjoy better washing properties with minimal changes in colour and shape.

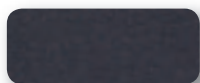

COTTON CANVAS

Material: 100% cotton, 320 g/m². **Features:** 100% natural cotton material. The special weaving technique produces a robust, hard-wearing surface and contributes to the powerful "Canvas-look". Has equivalent properties to Snickers Absolute Cotton, but the different weave and the lower weight makes the fabric softer.

DURATWILL™

Material: 52% cotton/48% polyamide, 240 g/m². **Features:** Due to the special weave, most of the cotton faces inward and most of the polyamide faces outward for maximum comfort and durability. Features a slightly impregnated surface, offering good resistance to moisture, oil and dirt. Keeps its shape well and is easy to care for.

COOLTWILL™

Material: 65% polyester/35% cotton, 195 g/m². **Features:** Lightweight and strong, perfect to wear in hot temperatures. Combines the comfort of cotton and the durability of polyester, as Service Line, but with a lighter weight. Withstands the high washing temperatures of industrial laundries.

SERVICE LINE™

Material: 65% polyester/35% cotton, 250 g/m². **Features:** Lightweight and strong. Combines the comfort of cotton and the durability of polyester. Garments retain their shape and colour longer. Withstands the high washing temperatures of industrial laundries.

POWER POLYAMIDE

Material: 100% polyamide 220–240 g/m². **Features:** Power polyamide made of high tenacity fibres in 100% polyamide for optimum protection. The oxford binding gives the fabric a rugged look. The outer surface is treated with a durable water repellent finish in order to repel dirt and water for long lasting performance. Is either coated or laminated.

Symbols Key

THESE SYMBOLS WILL HELP YOU FIND THE RIGHT GARMENT

They are used as guides in the product descriptions contained in this brochure. The following definitions apply:

| | | | |
|--|---|--|--------------------------------|
| | Personal Protective Equipment (PPE). When the CE mark is used alone in our trouser descriptions, it refers to knee protection. It is also used to show that our work gloves fulfill CE standards. | | EN 531 Protection against heat |
| | EN 342 Protection against cold | | KneeGuard™ |
| | EN 343 Protection against foul weather | | Freedom to move |
| | EN 471 High Visibility warning clothes | | MultiPocket™ |
| | | | Mobile phone |
| | | | UV-protection |

Snickers Colour Key

| | | | |
|--|---------------|--|---------------------------|
| | 01 Blue | | 12 Brown |
| | 02 Green | | 14 Mid Khaki |
| | 03 Red | | 15 Como Blue |

| | 06 Yellow | | 55 High visibility orange |
| | 07 Ash grey | | 58 Steel Grey |
| | 08 Light Grey | | 66 High visibility yellow |
| | 09 White | | 74 Muted black |
| | 10 Khaki | | 75 Muted navy |
| | 11 Light Blue | | 95 Navy |

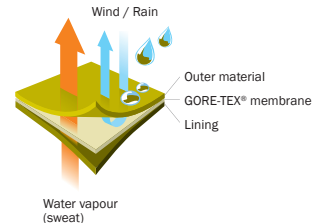

HIGH TECHNOLOGY AT WORK.

At Snickers Workwear, we are driving the application of advanced materials in work wear design, taking advantage of the latest technological developments, when and where it can improve on-the-job comfort, protection and durability.

GORE-TEX® MATERIALS

GORE-TEX® Technical Garments are extremely durable, waterproof to keep you dry, windproof to keep you warm, and breathable to keep you comfortable – all day long. The GORE-TEX® membrane has over 1.4 billion pores per square cm. The pores are 20,000 times smaller than a drop of water, but 700 times bigger than a molecule of moisture vapour. This prevents water from penetrating, while it aids your body's natural cooling process by allowing perspiration vapour to escape. Special GORE-SEAM® tape ensures that all seams are 100% water proof.

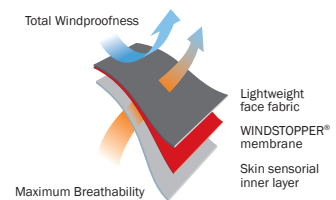

WINDSTOPPER® MATERIALS

WINDSTOPPER® materials combines total windproofness with maximum breathability to keep you warm and comfortable:

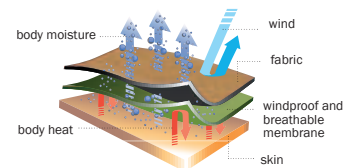

- The Windproofness protects your body's warmth from the chilling effects of wind and weather.
- Maximum breathability prevents overheating and perspiration build-up by allowing moisture vapour to escape easily.

A durable water repellent finish provides additional weather protection.

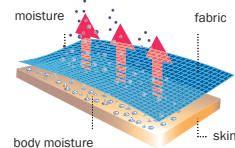

A.I.S. ACTIVE INSULATION SYSTEM™

A lightweight and soft microfleece fabric. It is an ideal mid-layer for any outdoor activity with its insulating and high moisture transportation ability. This will keep you warm, comfortable and dry. This fabric has also the special feature of being windproof.

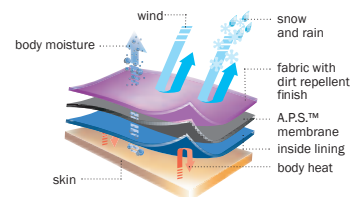

A.V.S. ACTIVE VAPORIZE SYSTEM™

A lightweight and high-tech fabric. This garment has outstanding breathability which will keep your body dry and comfortable during hard activity.

A.P.S. ACTIVE PROTECTION SYSTEM™

Will keep you dry and comfortable during hard conditions. This 3-layer construction is developed to keep wind, water and dirt out while maintaining high breathability.

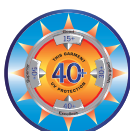

CORDURA®

Material: 100 % polyamide. **Features:** Cordura® by Invista is a high technology fabric made with air-textured polyamide fibres able to meet the toughest standards of strength and durability – yet remain light and stylish. Because it is an extremely tough and hardwearing material, we use it to reinforce exposed parts on Snickers garments such as pockets, knees and sleeves. It is also water and dirt repellent, easy to care for and retains its shape.

COOLMAX®

Coolmax® fabrics are designed to move moisture away from the body and enhance fabric drying rate, thus keeping you feeling cool and dry. Coolmax® moves perspiration, through channels in the fibres structure away from the body to the fabric's outer surface, where it can evaporate quickly. The performance of Coolmax® is inherent in the fibres structure itself, thereby providing consistent performance wash after wash. The soft, lightweight and breathable fabric gives clothes a natural feel with an added touch of performance that keeps them comfortable and brings cool comfort to everyday apparel.

UV-PROTECTION

Too much direct sunlight can damage the skin. Snickers UV-protected garments has a UPF (Ultraviolet Protection Factor) of 40+ or 50+. Snickers garments are tested in accordance with the international standards; EN 13758 and AS/NZS 4399:1996.

IMAGE IS EVERYTHING!

When it's done right, company profiling pays off. It is a stamp of quality that says a lot about you and your company. It helps your company stand out, making it more distinct and recognised for the right reasons. With Snickers Workwear you know that you are turning to the experts – able to offer a complete range of value adding services and product options. The right colours, customised embroidery and personalised packaging, just to name a few. Contact us today for all the inspiring details.

Image is everything.

logo?

Get recognised. Boost
your company image
and stand proud.

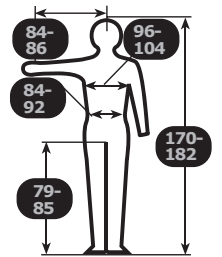

The best solution for
your company? Talk to
our profiling experts.
They know.

Embroidery, heat
sealing, labels? We'll
make your company
stand out in all the
right ways.

ENSURING AN OPTIMAL FIT.

Whatever your measurements, we want to ensure that you get optimally fitting garments. Our clothing sizes are based on established EU standards (En 340), which means that you can rely on getting the right size every time. To meet your needs, Snickers Workwear garments are available in many different sizes. For your convenience, we keep all standard sizes in stock for speedy deliveries (see specific garment for the standard size range). We are also proud to be able to offer special sizes – it may take a little longer, but it's well worth it. If you have any questions about sizes or measurements, feel free to contact your local Snickers Workwear distributor.

SIZE M
MEN

Every CE-marked garment has to have a label with a pictogram that shows the size and the body measurements of the person that the garment is intended for. This means that you always can check inside the garment to see the size.

MEN'S TROUSERS

| REGULAR BODY LENGTH (170 – 181) CM | | | | | | | | | | | | | |

Height

To ensure an accurate height measurement, you should be dressed and bare-footed.

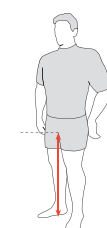

Chest

Dressed in a T-shirt, you should measure with a measuring tape around your chest just below your armpits.

Waist

Dressed in briefs or with trousers undone and lowered. Top raised, measuring tape where you usually have the waistband of your trousers. If you are measuring for a one-piece suit, be sure to measure where you have your biggest measurement, perhaps around the stomach.

Inside leg

When measuring the inside leg, you should be wearing trousers and bare-footed.

WOMEN'S TROUSERS

| REGULAR BODY LENGTH (164-175) CM | | | | | | | | | | |
|----------------------------------|--------|--------|--------|--------|--------|--------|--------|--------|--------|--------|
