

Special TC Router Cutter

Unique designed cutter with built in depth guiding bearing fitting to shank.

Setting-up

The diameter of the finished access hole will be 250mm. Carefully mark the centre point of the circle, if possible positioning the access hatch between the floor joists. Screw the Routabout jig to the floor using a single No. 8 particle board screw at the centre point to act as a pivot.

Routing Procedure

With the guide bush and cutter fitted to the router, place onto the template. The depth is automatically set by a top guide bearing attached to the cutter body. Rotate the router around the centre screw in a clockwise direction, cutting to the full depth in a series of shallow steps until the cutter breaks through.

Completed Cut

When cut, the waste piece is supported by the wings of the jig. The stepped cutter automatically cuts a rebated edge on the waste piece as well as around the edge of the hole.

End Result

Fit the plastic insert ring into the access hole and turn the waste piece over. Drop it into the ring and it will lie flush with the floor surface.

ROUTABOUT HOLE CUTTER

Patent No. GB2238751

Router not included.

Access to pipes & cables beneath chipboard floors in seconds. For builders, plumbers & electricians.

- A 250mm diameter opening can be cut and made good in seconds.
- Designed for use in new or existing 18mm and 22mm chipboard or similar floors.
- Cuts only the thickness of the board.
- No waste, the piece cut out is used to make good the floor.
- All you need is a plunge router (750 watts or above). Cutters are offered with 1/4", 8mm or 1/2" shank sizes.
- A Unibase may be required for certain makes and models of router.
